

ABSTRACT OF THE DISCLOSURE

A medical information processing system and a medical information processing recording medium therefor. In the medical information processing system, main control circuits are set to check
5 databases of data recording/reproducing means at a specified time interval or at a specified time. If the databases contain new patient information, the main control circuits automatically prepare e-mail including the new patient information and the patient's ID and send the e-mail through the Internet to one or more predetermined destinations
10 such as ophthalmology data processing terminals.
